PROFILE

I'm a backend software engineer with over two years of experience building reliable systems using the MERN stack and Java/Spring Boot. I enjoy creating clean, well-structured APIs, working with microservices, and building secure features for finance-related products. I care about writing code that works well in real life, so I focus on good testing, clear logic, and smooth database performance.

I do my best work in teams where communication is open and progress is clear. I like learning with people, solving problems together, and building things that truly help users. When I'm part of a project, I show up fully focused, intentional, and ready to contribute. I want my work to have meaning, and I want any team I join to feel the value I bring.

PROFESSIONAL EXPERIENCE

Hydrogen Group
Software Engineer

March 2025 - June 2025

- Helped build a full Human Resource Information System (HRIS) for C&I Leasing, using Java and Spring Boot to create stable backend features.
- Designed clear, easy-to-use APIs for tasks like onboarding, offboarding, employee records, payroll processing, and automated tax calculations.
- Improved system speed and data accuracy by refining database queries and adding smart caching where needed.
- Supported the delivery pipeline by working with Git and Jenkins, and kept strong test reliability with high-coverage JUnit tests.
- Worked closely with product, frontend, and QA teams to make sure the backend matched business needs and behaved correctly end-to-end.
- Contributed to agile processes—joining stand-ups, planning sprints, reviewing work, and improving features through feedback and iteration.
- Maintained clean, secure controller logic and followed safe coding practices to protect sensitive HR and payroll information.

- Worked with a small team of four to design and build the backend for a ride-booking platform, helping the system run more smoothly and handle more users without issues.
- Used Java and Node.js, OOP principles, modern ES6+ features, and functional programming to create efficient and maintainable backend code
- Built mobile-friendly user interfaces with React and Tailwind CSS, connecting them to real-time APIs so users could book rides quickly and see updates instantly.
- Delivered features in short sprints, contributing to a steady workflow and helping the team keep quality high across releases.
- Improved database performance by refining models and queries in PostgreSQL, MySQL, and MongoDB, ensuring fast responses and accurate data throughout the platform.

HACKATHON PROJECTS

Hackaholics 6.0 - Lagos Edition | Wema Bank
Backend Engineer | 4th place - Grand Finale Qualified

October 10, 2025

Theme: Open Banking - Unified Financial Management Platform

Developed backend infrastructure for a comprehensive financial aggregation platform addressing the fragmentation of customers' financial lives across multiple banks, fintech wallets, and investment platforms

- Built a user onboarding system that included secure login, identity checks, and profile setup.
- Connected the Mono API to allow users to link multiple bank accounts and sync their transactions in real time.
- Created a payroll system for business users that handled automated salary calculations and payments.
- Designed clear and reliable REST APIs for account linking, transaction history, and combined financial data.
- Used strong data protection and encryption methods to keep all financial information safe.
- Worked closely with frontend developers and designers to deliver a full working

EDUCATION

Semicolon Africa

Diploma in Software Engineering

Lagos, Nigeria — Graduated 2024

- Completed a rigorous, project-based training in full-stack software development with a focus on backend engineering, Design thinking, and collaborative development.

CERTIFICATIONS

Certified Software Engineer, Semicolon Africa — 2024

Business Management Certificate, Henley

Business School — 2024

Henly Business School

Certificate in Business Management

Lagos, Nigeria — Graduated 2024

- Studied core principles of business, operations, and leadership with emphasis on applied strategy in tech environments.

SKILLS

Programming Languages

NodeJs (primary), Java, Python, Javascript

FrameWorks

Springboot (core experience), Django, Express.

Architecture & Methodologies

Microservices, Test-Driven Development (TDD), Agile, Scrum

Devops & Tools

Docker, Git & GitHub, Postman, Swagger/OpenAPI, Apache Pulsar

Databases

MySQL, PostgreSQL, MongoDB

Cognitive & Problem Solving

Design Thinking, Critical Thinking

Version Control

Git (github)

Cloud & Collaborative Tools

Jira, Confluence, CI/CD, Postman, ClickUp,

Docker, Swagger

PROJECTS

ANONYMOUS THERAPY

Anonymous Therapy is a subscription-based online support platform designed to help users book therapy sessions safely and privately. It provides a simple way for people to connect with therapists, schedule conversations, and maintain their emotional wellbeing through a secure digital space.

- Built the platform end-to-end using the MERN stack, focusing on both user experience and reliable backend workflows.
- Integrated Paystack to support monthly recurring payments, transaction checks, and smooth subscription management.
- Developed server-side features such as user accounts, chat functionality, and session scheduling with Node.js and Express.
- Added secure login and user protection with JWT, password hashing, and real-time chat using Socket IO.
- Managed data structure and storage with MongoDB and handled deployment through a CI and CD pipeline on Heroku.

DADABOY LOGISTICS

DadaBoy Logistics is a backend system built to support dispatch services, package movement, and real-time delivery updates. It provides the core engine that powers order handling, rider assignments, payment processing, and the full delivery journey for customers and businesses.

- Developed the backend foundation that manages dispatch workflows, package tracking, and operational logic.
- Integrated Paystack to enable smooth payments and built clear REST APIs for the frontend team to connect with.
- Implemented user authentication, delivery progress management, and payment verification to ensure secure and reliable operations.
